Hundreds of people each day pass their IT certification exams with Testking guaranteed certification resources and training kits.

Use the [IBM 000-134](#) questions and answers to practice for your next IBM certification exam. If you don't pass – you don't pay! Testking has the first and only 100% product satisfaction and exam passing guarantee. Advanced practice questions and answers help drive the information into your routine thinking and surpass 000-134 brain dumps in retention and skill building.

[IBM](#) 000-134 exam answers and practice questions can be used at home or office, installable on up to two PCs, or print the questions and answers to take with you and train on-the-go! IBM 000-134 preparation tools are the perfect fit for any IBM certification candidate with [000-134](#) training materials for every level of entry.

Exam Engine Features

Control your IT training process by customizing your practice certification questions and answers. The fastest and best way to train.

- * Truly interactive practice tests
- * Create and take notes on any question
- * Retake tests until you're satisfied
- * YOU select the areas of the exam to cover
- * Filter questions for a new practice test experience each time
- * Re-visit difficult questions

Exam: 000-134 Certification Questions & Answers

Question 1:

How must a function be defined in the corresponding JSF handler for it to be listed in the Page Data view?

- A. Private with no parameters
- B. Public with no parameters
- C. Private with at least one parameter
- D. Public with at least one parameter

Explanation:

Pending. Send your suggestion to feedback@testking.com.

Question 2:

Which statement is true about features such as EGL with LDAP Support or EGL with low-level MQ API support that a programmer includes while creating a new EGL project?

- A. The features can be removed at any time.
- B. The features can be disabled but not removed.
- C. The features can only be replaced by other features.
- D. The features cannot be removed later.

Explanation:

Pending. Send your suggestion to feedback@testking.com.

Question 3:

A customer has several subsystems that use identical values for most of the build descriptor options, but which need to vary just a few option values. What is the BEST way to share the identical values?

- A. Use the nextBuildPart option to chain from a subsystem build descriptor part to a common build descriptor part
- B. Use the nextBuildDescriptor option to chain from a subsystem build descriptor part to a common build descriptor part
- C. Import the common build descriptor part into the subsystem build descriptor part
- D. Copy the common build descriptor part into the subsystem build descriptor part

Answer: A

Question 4:

Which element CANNOT be included in a function?

- A. A return type
- B. A set of local variables
- C. Another function
- D. A set of parameters

Answer: A

Question 5:

Which method CANNOT be used to set the Table-name for an EGL implicit SQL statement?

- A. override the Table-name with the usingKeys option of the get statement
- B. hard-code the Table-name in the tableNames property of the SQLRecord definition
- C. use the tableNameVariables property of the SQLRecord definition
- D. set the sqlLib.currentSchema system variable before issuing the implicit SQL statement for generated Java programs

Answer: B

Question 6:

Which statement is true about the linkage options part?

- A. The fileLink element provides details on whether to use remote MQ queues.
- B. The callLink element provides details on how a call statement is to be implemented when calling a particular program, but has no effect on generation for the called program.
- C. The transferToTransaction element provides details on how a transfer to transaction statement is to be implemented when transferring control to a particular transaction in transactional environments such as CICS, but has no effect on generation of programs for nontransactional environments.
- D. The transferToProgram element provides details on how a transfer to program statement is to be implemented when transferring control to a particular program.

Answer: A

Question 7:

Consider the following source code:

```
sourceTimeStamp TIMESTAMP (MMdd;  
targetTimeStamp TIMESTAMP (yyyMMddHHmmss sourceTimeStamp = "0615"  
targetTimeStamp = sourceTimeStamp;
```

If this statement runs on March 10, 2008 at 2:38:40 AM, what is the resulting value for targetTimeStamp?

- A. 20080615000000
- B. 20080615023840
- C. 00000615000000
- D. 00000310000000

Answer: C

Question 8:

Which EGL statement is used to send a text form to a user, receive input from the user, and always return to the same program?

- A. Converse statement
- B. Forward statement
- C. Show statement
- D. Display statement

Answer: C

Question 9:

For SQL, which EGL statement correctly declares a cursor for subsequent processing in a fetch

loop?

- A. `execute #sql {get sqlRecordVariableName};`
- B. `openresultSetID with #sql {select from where for sqlRecordVariableName;}`
- C. `execute #sql {select from where}`
- D. `openresultSetID using #sql {select from where}`

Answer: D

Question 10:

Which statement is true about programs with the stereotype of BasicProgram?

- A. A basic program cannot use most EGL statements or system libraries.
- B. A basic program cannot access databases or files.
- C. A basic program cannot communicate with a user through a browser or 3270 screen.
- D. BasicProgram is one of several stereotypes that are included in the core EGL package.

Answer: A

Question 11:

Which choice is NOT a category of preferences that can be set for the EGL Editor using Window > Preferences > EGL > Editor?

- A. Folding
- B. Source Styles
- C. SQL Database Connections
- D. Formatter

Answer: B

Question 12:

A function has logic that uses an index when referencing a dynamic array. Which technique permits the logic in the function to continue to run even if there is an ARRAY OUT OF BOUNDS EXCEPTION such as the index being set to zero?

- A. include a try/onException block in the function with a record type of IndexOutOfBoundsException
- B. code logic similar to if (myIndex is inbounds) before using the index
- C. setthecheckIndexOutOfBounds build descriptor option to YES
- D. You cannot do this because the run unit always stops when you get an ARRAY OUT OF BOUNDS EXCEPTION.

Explanation:

Pending. Send your suggestion to feedback@testking.com.

Question 13:

Which statement is true about the EGL Deployment Descriptor file?

- A. It is a file used to describe how an EGL service is exposed to other applications or how an external service is used.
- B. It is the same as the EGL Build Descriptor file.
- C. It is a part within the EGL Build Descriptor file and is used to define the access to and from EGL Web services.
- D. It is the same as the J2EE Deployment Descriptor file.

Answer: C

Question 14:

An EGL application running in a stateless environment (Web, CICS, or IMS) has presented data to the user for update. What is the BEST way to update an SQL row containing many columns if there is a chance that some other user could change the data?

- A. Just update the row as quickly as possible
- B. Reread the row before the update and ensure all columns are the same as before the data was presented to the user

TestKing [IBM 000-134](#) Exam Questions & Answers

- C. Lock the row across the user think time so no one else can change it
- D. Reread the row and compare some column that is known to be changed on every update (a timestamp, for example)

Answer: B

Question 15:

Which choice is a valid stereotype for a record?

- A. ExternalType
- B. CSV
- C. Form
- D. Array

Answer: D
