Hundreds of people each day pass their IT certification exams with Testking guaranteed certification resources and training kits.

Use the [IBM 000-419](#) questions and answers to practice for your next IBM certification exam. If you don't pass – you don't pay! Testking has the first and only 100% product satisfaction and exam passing guarantee. Advanced practice questions and answers help drive the information into your routine thinking and surpass 000-419 brain dumps in retention and skill building.

[IBM](#) 000-419 exam answers and practice questions can be used at home or office, installable on up to two PCs, or print the questions and answers to take with you and train on-the-go! IBM 000-419 preparation tools are the perfect fit for any IBM certification candidate with [000-419](#) training materials for every level of entry.

Exam Engine Features

Control your IT training process by customizing your practice certification questions and answers. The fastest and best way to train.

- * Truly interactive practice tests
- * Create and take notes on any question
- * Retake tests until you're satisfied
- * YOU select the areas of the exam to cover
- * Filter questions for a new practice test experience each time
- * Re-visit difficult questions

Exam: 000-419 Certification Questions & Answers

Question 1:

Click the Exhibit button.

TYPE	FREQ	FIRSTACC	V9
MD	3	2	19990401
DD	4	1	19990314
DN	5	4	19980302

Given the survivorship rules shown below:

<AllColumns>: (c.TYPE <>"DD") ;

<AllColumns>: (c.FREQ>b.FREQ) ;

<AllColumns>: (c.FIRSTACC = 1) ;

V9: (c.V9 > b.V9) ;

Referring to the exhibit, which output will result from the survivorship rules above?

- A. MD,3,1,19990401
- B. DD,4,1,19990314
- C. DN,5,1,19980302
- D. DD,5,1,19980302

Answer: B

Question 2:

You want to run a word investigation using data with both Japanese and Latin columns. Which two requirements will meet your needs?

- A. Use Information Server installed with the NLS option.
- B. Use the correct Japanese NLS map in the job properties.
- C. Set the codepage of theQualityStage client to "Japanese".
- D. Specify UTF16 as the default character set for the Information Server.

Answer: A,B

Question 3:

The text shown below would be found in which column defined in the Dictionary file?

^ D + T

- A. Input data
- B. Unhandled data
- C. Unhandled pattern
- D. Exception data

Answer: C

Question 4:

When running Word Investigation, producing a pattern report will help you do what?

- A. Refine a standardization rule set.
- B. Decide which fields to use for blocking fields.
- C. Discover inconsistencies in data type representation.
- D. Identify which patterns should survive.

Answer: A

Question 5:

What are three reasons why you would use the Match stage? (Choose three.)

- A. to identify all records on one file that correspond to similar records on another file
- B. to build relationship between records in multiple files
- C. to normalize values in datafiles to standard values.
- D. to enforce business standards on data elements
- E. to identify duplicate records in one file

Answer: E

Question 6:

For an Unduplicate Match, how does the Match stage determine the master record?

- A. the record within a block with the most unhandled data
- B. the record within a block with the most values populated
- C. the record within a block that matched to itself with the highest weight
- D. the record within a block that occurred last

Answer: C

Question 7:

When you are configuring Variable Special Handling in the Match Designer, what are three valid actions that can be selected? (Choose three.)

- A. CRITICAL
- B. CLERICAL
- C. BASIC
- D. NOMARKED
- E. NOFREQ

Answer: A,B,E

Question 8:

A number of customer records have compound name structures (e.g., James and Elizabeth Smith). For subsequent matching purposes both names should be standardized into discrete name components. Which two techniques should be used to standardize both names? (Choose two.)

- A. Use a preparation rule set to separate the name domains appropriately for input to standardization.
- B. Leave the secondary names unparsed in the additional name information field and use this field in the subsequent matching process.
- C. Modify the name rule set to process secondary names. Modify the dictionary file to accommodate the new secondary parsed fields along with modifying the Pattern Action file to recognize and process secondary names.

D. Run name standardization allowing additional names. Execute a subsequent name standardization process using the additional name information field as input.

Answer: C,D

Question 9:

You run a job that applies USADDR address standardization on free-form addresses using out-of-the-box rules. Which two types of output are expected? (Choose two.)

- A. Longitude and Latitude are determined.
- B. Phonetic values are added for street names.
- C. Address elements are parsed into individual fields.
- D. New Address Line1, Address Line 2 and Address Line 3 are formatted.

Answer: B,C

Question 10:

You identified that last name phonetics should be used as part of your blocking criteria and your input file does not contain this information. Which action will create the phonetics?

- A. Use the match specification to automatically generate phonetics.
- B. Use Standardize stage with a name rule set to create phonetics.
- C. Use Surrogate Key Generator stage
- D. Ask the customer to provide phonetic information.

Answer: B

Question 11:

An enterprise has many address records with the word "NULL" embedded in the text. They want to remove this word from the text. Which two techniques would be used to accomplish this? (Choose two.)

- A. Use the input text override screen to eliminate the "NULL" word.
- B. Set the Null Value field in extended properties of the File Stage to "".
- C. Add the word "NULL" to the address rule set classification table.
- D. Modify the Pattern Action Language to retype the token with the value of "NULL".

Answer: C,D

Question 12:

What describes the correct sequence needed to copy a rule set?

- A. Select the Standardization Rules folder.
Expand the desired rule set folder.
Right-click the PAT file and select Create copy.
- B. Select the Standardization Rules folder.
Expand the desired rule set folder.
Right-click the SET file and select Create copy.
- C. Select the Standardization Rules folder.
Expand the desired rule set folder.
Right-click the rule set and select Create copy.
- D. Select the Standardization Rules folder.
Right-click and select Create copy.

Answer: B

Question 13:

You built and tested a match job. Now you want to move it to the production server. Which three components should be moved to the production server? (Choose three.)

- A. job
- B. match passes
- C. rule sets
- D. match specifications
- E. Match Designer evaluation database

Answer: A,B,D

Question 14:

Which two statements are true about QualityStage survivorship? (Choose two.)

- A. A rule can have only one target and a TRUE condition expression.
- B. The input record requires a group identifier.
- C. All input records must be combined into one input link.
- D. A Survive job requires that you link a single input stage with multiple output stages.
- E. The output file definition is the same as the input file definition.

Answer: B,C

Question 15:

Click the Exhibit button.

Based on the standardization results in the exhibit, which two actions will move "WINTER SQUAREROOT" to {ExceptionData}? (Choose two.)

UnhandledPattern	UnhandledData	InputPattern	OriginalData
++	PUMPKIN PIE	^D+TU^++	15 South Main Street Apt 6, Pumpkin Pie
++	APPLE PIE	^D+T.U^++	27 N Meadowbrook Ave. Ste 9, Apple Pie
++	BLACKBIRD PIE	^+TU^++	1313 Mockingbird Ln. Blackbird pie
++	WINTER SQUAREROOT	++	Winter Squareroot

- A. Add Input Text override for ++, moving all data to {ExceptionData}.
- B. Add Input Text overrides for "WINTER" and "SQUAREROOT" moving to {ExceptionData}.
- C. Edit the Pattern Action file and add the pattern + | + moving data to {ExceptionData}.
- D. Assign a class of A to "WINTER" and "SQUAREROOT".

Answer: B,C
