IBM Tivoli Storage Manager V5.5 Administration

Exam number/code: 000-431

Exam name: IBM Tivoli Storage Manager V5.5 Administration

Questions & Answers: 85 Q&A

Related Certifications: [Certified Administrator](#)

Hundreds of people each day pass their IT certification exams with Testking guaranteed certification resources and training kits.

Use the [IBM 000-431](#) questions and answers to practice for your next IBM certification exam. If you don't pass – you don't pay! Testking has the first and only 100% product satisfaction and exam passing guarantee. Advanced practice questions and answers help drive the information into your routine thinking and surpass 000-431 brain dumps in retention and skill building.

[IBM 000-431](#) exam answers and practice questions can be used at home or office, installable on up to two PCs, or print the questions and answers to take with you and train on-the-go! IBM 000-431 preparation tools are the perfect fit for any IBM certification candidate with [000-431](#) training materials for every level of entry.

Exam Engine Features

Control your IT training process by customizing your practice certification questions and answers. The fastest and best way to train.

- * Truly interactive practice tests
- * Create and take notes on any question
- * Retake tests until you're satisfied
- * YOU select the areas of the exam to cover
- * Filter questions for a new practice test experience each time
- * Re-visit difficult questions

Exam: 000-431 Certification Questions & Answers

Question 1:

The storage administrator wants to manually expire data from the TSM database and run this command for one hour. Using the administrative command line interface, which command should be used to expire the data?

- A. expire data du=60
- B. expire inventory du=60
- C. expire database du=1 duru=h
- D. expire catalogue du=1 duru=h

Answer: B

Question 2:

Query process process_number

- A. C. Validate destination type=lanfree
- D.
- C. Validate destination type=lanfree
- D.

Answer: A

Question 3:

The UNIX system administrator wants to know which client options are being set centrally from the TSM Server. Which TSM server command should the storage administrator issue to find out this information after first reviewing the output of QUERY NODE F=D?

- A. QUERY STATUS
- B. QUERY OPTIONSET F=D
- C. QUERY CLOPTSET
- D. QUERY CLIENTOPT

Answer: C

Question 4:

An administrator wants to determine whether a client node has been defined correctly and whether the node has permission to delete backup data. Which command should the administrator use to accomplish this?

- A. Query client options command
- B. Query node command with the detailed format option
- C. Query client command with the detailed format option
- D. Query registered command with the detailed format option

Answer: B

Question 5:

What are all copy groups named?

- A. Active
- B. Default
- C. Standard
- D. Copy Group

Answer: C

Question 6:

An administrator is attempting to define a storage pool to back up a large number of clients with small files. Which storage pool should the administrator define first?

- A. A disaster recovery storage pool
- B. A primary random access storage pool
- C. A sequential access copy storage pool
- D. An active data storage pool

Answer: B

Question 7:

An administrator at ABC company wants to use the COPY ACTIVEDATA command to copy active versions of backup data from a primary storage pool to an active-data pool. This command performs similarly to which command?

- A. COPY DATA
- B. MOVE DATA
- C. COPY STGPOOL
- D. BACKUP STGPOOL

Answer: D

Question 8:

An administrator schedule should be used in many cases to alleviate the common tasks a TSM storage administrator is required to perform. How should the TSM administrative schedule be used?

- A. To run macros
- B. To register new clients
- C. To query the activity log
- D. To backup a storage pool

Answer: D

Question 9:

The storage administrator wants to create a sequential disk storage pool with a devclass of FILE on the linux TSM server. The administrator wants to select the local filesystem with the most available space. What is used to accomplish this?

- A. Lspci

- B. Df -a
- C. Ls -lh
- D. Fdisk *

Answer: B

Question 10:

The storage administrator receives errors from the tape subsystem regarding a tape and difficulty reading the label. The administrator wants to check it out for inspection and wants to ignore any label read errors in the process. Which command accomplishes this?

- A. LABEL LIBVOL <library> <volume name> CHECKLABEL=NO REMOVE=BULK FORCE=YES
- B. CHECKOUT LIBVOLUME <library> <volume name> CHECKLABEL=NO REMOVE=BULK FORCE=YES
- C. CHECKOUT LIBVOLUME <library> <volume name> CHECKLABEL=NO REMOVE=IOSTATION FORCE=YES
- D. CHECKOUT VOLUME <library> <volume name> CHECKLABEL=NO REMOVE=IOSTATION FORCE=YES

Answer: B

Question 11:

The storage administrator needs to migrate a TSM server to a new machine and must do a TSM database backup after backing up all of the nodes' data. The TSM server has an automated LTO library and a storage pool LTO_STG using a device class called LTO_DEVCLASS. Which command must be used to do a full database backup on the TSM server?

- A. backup db stg=LTO_STG type=full
- B. backup db devclass=LTO_DEVCLASS type=full
- C. backup database devclass=LTO_DEVCLASS type=full
- D. backup database stg=LTO_STG devclass=LTO_DEVCLASS type=full

Answer: B

Question 12:

The local systems engineer advises you to mirror the TSM database. In order to find out how much space to allocate for mirroring, the current space used by the TSM database must be determined. What accomplishes this?

- A. QDB
- B. DBSHOW
- C. SHOW DBFULL
- D. QDB -ALLLOCATED

Answer: A

Question 13:

Most of the drives on a Linux client system must be backed up daily. One drive contains business critical data and must be backed up hourly. The system administrators are too

TestKing [IBM 000-431](#) Exam Questions & Answers

busy to deal with manual backups and require the processes to be scheduled. All backup processing runs at night, so these schedules may overlap. Which two steps should the system administrator take to schedule the backups? (Choose two.)

- A. Run each process using a different node name
- B. Run both scheduled processes using the same node name
- C. Use multiple stanzas in the dsm.sys file for each scheduler process
- D. Use the same values for the options errorlogname and schedlogname

Answer: A,C

Question 14:

Which copy group parameter controls the number of backup versions?

- A. VERDELETE
- B. VEREXISTS
- C. RETEXTRA
- D. RETONLY

Answer: B

Question 15:

What are three ways to label a new tape and add it to an SCSI library? (Choose three.)

- A. dsmlabel
- B. dsmformat
- C. LABEL LIBVOLUME
- D. CHECKIN LIBVOLUME with AUTOLABEL=YES and CHECKLABEL=YES Option
- E. UPDATE DEVCLASS to use AUTOLABEL, then CHECKIN LIBVOLUME with CHECKLABEL=BARCODE Option
- F. UPDATE LIBRARY to use AUTOLABEL, then CHECKIN LIBVOLUME with CHECKLABEL=BARCODE Option

Answer: A,C,F
