Hundreds of people each day pass their IT certification exams with Testking guaranteed certification resources and training kits.

Use the [Oracle 1z0-232](#) questions and answers to practice for your next Oracle certification exam. If you don't pass – you don't pay! Testking has the first and only 100% product satisfaction and exam passing guarantee. Advanced practice questions and answers help drive the information into your routine thinking and surpass 1z0-232 brain dumps in retention and skill building.

[Oracle](#) 1z0-232 exam answers and practice questions can be used at home or office, installable on up to two PCs, or print the questions and answers to take with you and train on-the-go! Oracle 1z0-232 preparation tools are the perfect fit for any Oracle certification candidate with [1z0-232](#) training materials for every level of entry.

Exam Engine Features

Control your IT training process by customizing your practice certification questions and answers. The fastest and best way to train.

- * Truly interactive practice tests
- * Create and take notes on any question
- * Retake tests until you're satisfied
- * YOU select the areas of the exam to cover
- * Filter questions for a new practice test experience each time
- * Re-visit difficult questions

Exam: 1z0-232 Certification Questions & Answers

Question 1:

At ABC company, the change management group has decided to provide the role of approving POs to the purchasing manager, and has asked the system administrator to make the changes to the roles. Which privileges does the system administrator need to perform this task? (Choose two.)

- A. User Administration
- B. None of the above
- C. Role Administration
- D. System Administration

Answer: A,C

Question 2:

The accounting department wants to implement a mechanism that downloads account balances to the data warehouse for decision-support processing. The data warehouse is in an Oracle-centric warehouse in another database instance.

The requirements dictate that the program must:

- 1) Execute daily at 11pm
- 2) Send a notification to the business analyst indicating the status of the process
- 3) Record statistics of what was transferred for tracking and tie out purposes
- 4) Execute an Oracle Discoverer program to display the results

Which of the above requirements CANNOT be met by submitting a concurrent request, and why?

- A. the statistics requirement, because there is no mechanism through which run time statistics can be presented to the user.
- B. the Discoverer requirement, because Oracle Discoverer functions cannot be executed as a concurrent request.
- C. the notification requirement, because the concurrent manager cannot perform any processing functions when a request is completed.
- D. the notification requirement, because a concurrent request cannot initiate a workflow notification.
- E. the download requirement, because a concurrent request can only read data in, or write data to, the applications database.
- F. the resubmission of the concurrent request, because a program cannot be re-submitted at daily intervals.

Answer: B

Question 3:

Your company is recovering from an incident where one of the application developers used the Developer Administration responsibility to deactivate the Conflict Resolution Manager in production, thus causing delays in business operations. You have successfully re-started the concurrent manager, and the operations of the business have returned to normal. The chief operations officer wants to know if this issue can be prevented in the future. How can the Developer Administration responsibility be altered to satisfy the chief operations officer's requirement?

- A. by changing the Request Security Group.
- B. by adding a Securing Attribute.
- C. by adding a Menu Exclusion.
- D. by assigning a Profile Option Value.
- E. by changing the Data Group.

Answer: C

Question 4:

Which component of the user creation screen identifies the access of a user?

- A. Menu
- B. Function
- C. Responsibility
- D. Role

Answer: C

Question 5:

Which two aspects are required to be entered to submit Journal Import as a concurrent request? (Choose two.)

- A. completion options
- B. parameters
- C. concurrent program name
- D. printing options
- E. submission schedule

Answer: B,C

Question 6:

Which three types of integration does the Business Event System support? (Choose three.)

- A. parent/child messaging
- B. simple object access protocol (SOAP) messaging
- C. point-to-point
- D. messaging hub system
- E. distributed applications messaging

Answer: C,D,E

Question 7:

Which two components are optional when creating a responsibility? (Choose two.)

- A. Request Group
- B. User Assignments
- C. Exclusions
- D. Menu
- E. Data Group

Answer: A,C

Question 8:

Because of security concerns, Receivables clerks were initially not provided with access to the Customer form. This customer form is a standard Oracle form developed based on template.fmb. After careful consideration, they were authorized to only view the customer information. The system administrator was assigned the task of making it possible for the clerks to view the customer information but not modify any customer-related data. Identify how best to meet this requirement quickly and with minimal effort.

- A. Create a copy of the form and modify the form to make it read only.
- B. Create a new function and enable the query_only check box.
- C. Create a new form to make it read only.
- D. Create a new function pointing to the same form and use the QUERY_ONLY parameter to make it read only.

Answer: D

Question 9:

One of the integration architects is attempting to standardize the path locations for inbound and outbound feeds for the applications.

Currently they are providing the full path name of the file on the file system when they submit the request to load the feeds. They would like to soft code the path of the file name by server to shorten the parameter entry and reduce key errors when submitting the interfaces.

Currently all of the feeds, both inbound and outbound, are being kept in a single directory on the server. They would like to separate the files into directories by application, and have a separate inbound and outbound feed directory.

This is a global implementation with middle-tier services strategically placed around the world. The North American services are all from the data center in New York. The European services are being provided from the European data center in England, and the Asia-Pacific services are hosted in a data center in India.

The architect's plan is to create two profile options: one for inbound path and one for outbound path. All the utl_file directories used by the integration programs would be standardized for use. His plan is to set them at the application and server level to soft code the directory path for all of the integration points.

He would also like to provide users with the ability to change the path for their user, or for a development-centric responsibility only to support individual testing efforts on non-production servers.

He would also prefer to prevent anyone from setting the value of the profile option at the operating unit level.

Identify the flaw in the architect's proposed solution.

- A. The interfaces would not be able to read the value of the profile option at the server level.
- B. A profile option can only be assigned to one hierarchy type.
- C. Interfaces do not run under a specific responsibility.
- D. The value of the profile option cannot be controlled by the server.
- E. Profile options cannot be controlled by the operating unit.

Answer: B

Question 10:

TestKing Oracle 1z0-232 Exam Questions & Answers

Which two methods can you use to transfer workflow definitions to a stand-alone Oracle Workflow database? (Choose two.)

- A. Workflow Definition Loader concurrent request
- B. Workflow Builder
- C. FNDLOAD
- D. wflowd

Answer: B,D

Question 11:

As a system administrator, you are requested to create a new responsibility called "Purchasing Buyer," which is identical to "Purchasing Manager" except that requisitions functionality is given only to the purchasing manager. You are able to satisfy the requirement using any of the options shown. Identify the option that is aligned with best practices.

- A. by creating a new responsibility and using the menu exclusion feature
- B. by not creating a new responsibility and menu, but using exclusion features for both
- C. by creating a new responsibility and a new menu
- D. by creating a new menu, but using the responsibility exclusion feature

Answer: A

Question 12:

Because of performance issues regarding the application system, the IT department has decided to run all resource intensive reports during non-peak hours of business. They presented a list of 10 reports that can be scheduled, and further mentioned that five of the reports can be run concurrently. The remaining five reports have to be run sequentially, and are not dependent on each other. The system administrator has been tasked to create a request set and schedule it to run at 10 PM EST everyday. Which two statements are true? (Choose two)

- A. Linking of stages is not mandatory.
- B. All the reports that are to be run sequentially have to be in different stages.
- C. The new request set would have a maximum of two stages.
- D. All the reports that are to be run concurrently have to be in the same stage.

Answer: B,D

Question 13:

The Oracle Workflow notification system can send e-mail notifications to _____.

- A. users on Oracle-based e-mail systems only
- B. only 11i Oracle Applications users using a standards-based, internet-accessible e-mail system
- C. only 11i Oracle Applications users using Oracle-based e-mail systems
- D. users with any standards-based, internet-accessible e-mail system

Answer: D

Question 14:

Identify three actions users can perform when submitting a request set. (Choose three.)

TestKing Oracle 1z0-232 Exam Questions & Answers

- A. Users can schedule the request set to run periodically.
- B. Users can enter the values to the parameters for the concurrent programs.
- C. Users can specify the print options for the programs.
- D. Users can decide whether the programs can run in parallel or sequential.

Answer: A,B,C

Question 15:

You have just submitted a concurrent request. The concurrent program is incompatible with itself. The request would not be placed on hold. The request would spawn a child request. The request was submitted to print two copies but a printer was not specified. Analyze these facts and select the statement that correctly describes the phase and status codes, in correct order, that the request would have-from submission to completion.

- A. Pending -Normal, Pending Standby, Pending - Normal, Running Normal, Running - Paused, Running Normal, and Completed Warning
- B. Pending - Normal, Pending - Standby, Pending - Normal, Running Normal, Running - Paused, Running Normal, and CompletedNormal
- C. Pending - Standby, Pending - Normal, Running Normal, Running - Paused, Running Normal, and Completed - Warning
- D. Pending - Standby, Pending - Normal, Running Normal, Running - Paused, Running Normal, and CompletedNormal
- E. Pending - Normal, Pending - Standby, Pending - Normal, Running Normal, Running - Paused, Running Normal, and Completed Error
- F. Pending - Standby, Pending - Normal, Running Normal, Running - Paused, Running Normal, and Completed Error

Answer: C
