Hundreds of people each day pass their IT certification exams with Testking guaranteed certification resources and training kits.

Use the [Microsoft 70-620](#) questions and answers to practice for your next Microsoft certification exam. If you don't pass – you don't pay! Testking has the first and only 100% product satisfaction and exam passing guarantee. Advanced practice questions and answers help drive the information into your routine thinking and surpass 70-620 brain dumps in retention and skill building.

[Microsoft](#) 70-620 exam answers and practice questions can be used at home or office, installable on up to two PCs, or print the questions and answers to take with you and train on-the-go! Microsoft 70-620 preparation tools are the perfect fit for any Microsoft certification candidate with [70-620](#) training materials for every level of entry.

Exam Engine Features

Control your IT training process by customizing your practice certification questions and answers. The fastest and best way to train.

- * Truly interactive practice tests
- * Create and take notes on any question
- * Retake tests until you're satisfied
- * YOU select the areas of the exam to cover
- * Filter questions for a new practice test experience each time
- * Re-visit difficult questions

Exam: 70-620 Certification Questions & Answers

Question 1:

You work as the desktop support technician at TestKing.com. The TestKing.com network consists of a Active Directory domain named testking.com. All client computers on the TestKing.com network run Windows Vista and are members of the domain. You use a client computer named TESTKING-WS620. You make use of Microsoft Windows Calendar to publish a calendar on TESTKING-WS620. A Testking.com user named Mia Hamm has subscribed to your calendar. You update the calendar by assigning tasks to it. However, Mia Hamm informs you that the tasks only appear a day after you publish them to the calendar. You want the updates to be displayed on Mia Hamm's view the calendar sooner.

How can you achieve this?

- A. You should configure Mia Hamm's subscription options.
- B. You should configure the Resource Scheduling options.
- C. You should configure the calendar's Attendees list.
- D. You should modify the permissions of the calendar.
- E. You should configure the calendar's appointment details.

Answer: A

Question 2:

Which of the following accessibility options enables keyboard shortcuts to be pressed one by one instead of being pressed simultaneously?

- A. Sticky key
- B. Filter key
- C. Narrator
- D. Toggle key

Answer: A

Question 3:

TestKing.com has employed you as a desktop technician. The TestKing.com network consists of a single Active Directory domain named testking.com. All client computers on the network run Microsoft Windows Vista. The network contains a Virtual Private Network Named TK_VPN.

A TestKing.com user named Kara Lang has been assigned a remove workstation named TESTKING-WS622. How can you ensure that Kara Lang is able to establish connectivity to TK_VPN after setting up the VPN Connection?

- A. By using the Wireless Network Connection program.
- B. By using Internet Connection Sharing.
- C. By using the System and Maintenance program.
- D. By using the Network and Sharing Center program.
- E. By using the Internet Explorer program.

Answer: D

Explanation:

The Network and Sharing Center program is where you would go to view all your network connections including VPN connections. From within the Network and Sharing Center program, you can select the VPN connection and connect to it.

Question 4:

You are employed as a network technician at TestKing.com. The TestKing.com network consists of a single Active Directory domain named testking.com. In order to allow connectivity to Internet and wireless internet, a hardware router has been configured on the network.

You have a user named Kara Lang who has been using the internet on her workstation named Testking-WS680. However she is unable to see any other computers when she uses the wireless network connection for connectivity.

How can you help Kara Lang to solve this problem?

- A. By disabling the wired network connection.
- B. By changing the Network Category setting of the wireless connection to Public.
- C. By disabling SSID broadcasting on the wireless access point.
- D. By turning off the Windows Firewall feature.
- E. By configuring the File and Print Services firewall exception in Windows Firewall.
- F. By configuring the network category of your wireless network connection to Private.

Answer: F

Explanation:

If the network category of the wireless connection is set to public, the network discovery feature is disabled. As the wireless connection is 'inside' the network (behind the router), you can safely configure the wireless connection network category to private. This will enable the network discovery feature.

Question 5:

You are employed as a network administrator at TestKing.com. The TestKing.com network consists of a single Active Directory domain named testking.com. All client computers on the testking.com network run Microsoft Windows Vista.

The TestKing.com network is divided into several departments, of which the Finance department is one. The TestKing.com Finance department has been assigned a client computer named TESTKING-WS621.

You are in the process of designing a backup and restore solution for TESTKING-WS621 that backs up all the contents of TK_APPS folder on the D: drive, restores specific files and folders located in TK_APPS folder, and also backs up and restores data from an external hard drive.

Which of the following options would you take to complete this objective?

- A. To back up and restore files, you should make use of the Backup and Restore Center.
- B. To perform backup and restore operations, you should make use of Automatic System Recovery feature.
- C. To restore the files and folders, you should make use of the File Replication Service (FRS).
- D. To back up and restore individual files and folders, you should make use of the NTBackup utility.

Answer: A

Question 6:

TestKing.com has employed you as a network administrator. The TestKing.com network consists of a single Active Directory domain named testking.com.

You have joined a meeting on Microsoft Windows Meeting Space and receive an invitation to join another meeting in the space application. However, you are unable to join the second meeting.

What should you do to join the other meeting?

TestKing [Microsoft 70-620](#) Exam Questions & Answers

- B. You need to click the Leave meeting option in the current meeting before you can join the other meeting.
- C. You need to disable User Account Control.
- D. You need to create an exception for Windows Media Player Network Sharing Service in the Windows Firewall.
- E. You need to create an exception for invitations from Windows Meeting Space in the Microsoft Windows Firewall.
- F. You need use Microsoft Office Live Meeting to join the other meeting.

Answer: B

Question 7:

You are employed as a help desk technician at TestKing.com. The TestKing.com network consists of a Workgroup named TestKing. The client computers on the TestKing.com network run a mix of Windows XP Professional and Windows Vista. You The TestKing.com management wants to conduct a meeting with all their users. You need to facilitate this meeting. However, invitation to the TestKing.com users are not getting sent as they do not appear in the Invite people list of the Microsoft Windows Meeting Space meeting.

What should you do to be able to invite all TestKing.com users to the Windows Meeting Space meetings? (Each correct answer presents part of the solution. Choose TWO.)

- A. You need to instruct the TestKing.com users with Windows XP Professional computers to create an exception for invitations from Windows Meeting Space in the Microsoft Windows Firewall.
- B. You need to upgrade the Windows XP Professional computers to Windows Vista.
- C. You need to configure the Windows XP Professional computers to use Microsoft NetMeeting to connect to the meeting.
- D. You need to instruct all members of the TestKing workgroup to sign in to the People Near Me feature.
- E. You need to install Service Pack 3 on the Windows XP Professional computers.

Answer: B,D

Question 8:

You work as a Desktop Technician at TestKing.com. The TestKing.com network consists of a single Active Directory domain named testking.com.

A TestKing.com user named Andy Reid has been assigned a client computer named TESTKING-WS620. Andy Reid complaints that when attempts to play an video file using Microsoft Windows Media Player he received an error message stating that he does not have the rights to play the file. You discover that the video file is a protected digital media file.

How can you ensure that Andy Reid can play the video file using Microsoft Windows Media Player?

- A. You need to configure Microsoft Windows Media Player by enabling the Automatically check if protected files need to be refreshed option.
- B. You need to configure Microsoft Windows Media Player by enabling the Download usage rights automatically when I play or sync a file option.
- C. You need to configure Microsoft Windows Media Player by enabling the Update music files by retrieving media info from the Internet option.
- D. You need to download and install the latest version of Microsoft Windows Media Player.
- E. You need to configure Microsoft Windows Media Player to download codecs automatically.

Answer: A

Question 9:

You are employed as a Desktop Technician at TestKing.com. The TestKing.com network consists of a single Active Directory domain named testking.com. You have been assigned a Windows XP workstation named TESTKING-WS620.

TESTKING-WS620 have the hardware configuration detailed below:

CD-ROM drive
CPU 2.0 Ghz
2 gigabytes (GB) of RAM
180 gigabytes (GB) hard disk drive that has 30 GB of free space
A 256-MB graphic adapter having support for
DirectX 9-class graphicsrhaving the support for
Windows Display Driver Model (WDDM) with Pixel Shader2.0

TestKing.com management wants to install Windows Vista on TESTKING-WS620. Management wants you to make sure that the hardware on TESTKING-WS620 can support the use of Windows Aero.

What hardware component should you upgrade in order to achieve this?

- A. You should consider upgrading the hard disk drive.
- B. You should consider upgrading the graphics adapter.
- C. You should consider adding a network adapter.
- D. You should consider installing a DVD-ROM drive.
- E. You should consider upgrading the CPU.

Answer: D

Question 10:

You have recently installed Windows Vista onto a reference computer that will be used to create an image that can then be deployed to sales employees' computers. You have installed and configured several proprietary sales applications on the computer. You have previously used the System Preparation Tool to remove any system-specific information from the computer, and you plan to use ImageX to create the image from this reference computer. Which option of the ImageX utility can you use to accomplish your goal?

- A. /apply
- B. /capture
- C. /mount
- D. /verify

Answer: B

Explanation:

To create a Windows Vista image from a reference computer using the ImageX utility, you should use the /capture option. This option captures the image into a new WIM file.

Question 11:

You are configuring a laptop computer running Windows Vista. You want to ensure that after a specified period of inactivity the computer is put into a power saving state. However, you want to ensure that data is saved to the hard disk, that the computer is quickly accessible on wakeup, and that the computer is never shut down. Which power-saving mode should you configure?

- A. Standby mode
- B. Sleep mode
- C. Hibernate mode
- D. Hybrid mode

Answer: B

Explanation:

To ensure that data is saved to the hard disk, that the computer is quickly accessible on wakeup, and that the computer is never shut down when put into a power-saving state, you should configure the computer to use sleep mode. Sleep mode is a combination of standby mode and hibernate mode. The user's session is quickly accessible on wakeup, but the data is saved to the hard disk. Sleep mode is the preferred power-saving mode in Windows Vista.

Question 12:

You work as the workstation specialist at TestKing.com. The TestKing.com network consists of a single Active Directory domain named testking.com. You have been assigned a workstation named TESTKING-WS612. TESTKING-WS612 is configured to run Windows Vista. You need to perform the following task.

Change the Windows Internet Explorer settings for the internal network to default. Make sure that the current settings for the Internet remain unaffected.

How can this be accomplished?

- A. This can be accomplished by selecting Trusted sites on the Internet Explorer Security tab. Then Reset all zones to default level should be clicked.
- B. This can be accomplished by selecting Trusted sites on the Internet Explorer Security tab. Then click Custom level and set the level to High.
- C. This can be accomplished by selecting Local intranet on the Internet Explorer Security tab. Then Reset all zones to default level should be clicked.
- D. This can be accomplished by selecting Local intranet on the Internet Explorer Security tab. Then click Custom level and set the level to High.
- E. This can be accomplished by selecting Trusted sites on the Internet Explorer Security tab and clicking Default level.
- F. This can be accomplished by selecting Local intranet on the Internet Explorer Security tab and clicking Default level.

Answer: F

Question 13:

You work as a Desktop Technician at TestKing.com. You are using a wireless connection to connect to a private wireless network. However you noticed that regular network users are able to access the shared resources.

How can you block the access for the regular network users in order to improve security?

- A. You should consider having the network location of the wireless network configured as public.
- B. You should consider having the File and Print Sharing firewall exception enabled.
- C. You should consider having Internet Connection Sharing disabled.
- D. You should consider having Parental Controls enabled.
- E. You should consider changing the IP address of the workstation.
- F. You should consider having Network Discovery disabled.

Answer: A

Question 14:

Your company uses a centrally-located, network-accessible projector in a designated conference room for presentations at meetings.

How can you address the projector remotely?

Choose the best TWO answers.

- A. Format asfiles:///C/server/path/projector.
- B. Format ashttp://SERVER/PATH/PROJECTOR.
- C. Format asftp://SERVER/PATH/PROJECTOR.
- D. Format asC:/PATH/TO/PROJECTOR.
- E. Format as\server\path\projector.

Answer: B,E

Question 15:

You work as the workstation specialist at TestKing.com. The TestKing.com network consists of a single Active Directory domain named testking.com. All client computers run Microsoft Windows Vista. You have been assigned workstation named TESTKING-WS621. How can you prevent TESTKING-WS621 from entering the sleep mode when it is sharing video files and other resources?

- A. You should consider modifying the display theme.
- B. You should consider disabling Simple File Sharing.
- C. You should consider modifying the Presentation Settings using the Windows Mobility Center.
- D. You should consider modifying the power plan using the Power options.

Answer: C
